

Become an Automotive Technician

WHAT

Expect New Things Every Day

This is not your standard, boring desk job. The automotive technician career will expand your technical ability, push your intellectual thinking, and engage your curiosity.

Tech is Driving the Future

Vehicles are rapidly changing – technicians are challenged daily to adapt to evolving technology. Self-driving cars, electrification, collision avoidance, and mobility solutions are just a sample of what you'll see.

The Dealership Difference

Original Equipment Manufacturers (OEMs) are industry leaders who focus on producing the next generation of automotive vehicles. These are the car brands you see on the road and read about in the paper – building autonomous vehicles, reducing greenhouse emissions, and changing the world.

There are numerous benefits to working for an OEM dealership: higher pay and better benefits, access to the newest technology, sponsored training, and of course, getting to work on your favorite cars. Find opportunities with the brands you love at GoProjectShift.com.

WHY

Great Pay & Advancement Opportunities

Many technicians today receive attractive compensation packages, including signing bonuses, competitive salaries, and enhanced benefits. There's also room for career growth, both within the dealership and at the brand level.

Earn Faster with Less Debt

Jump-start your career and earn money faster. Automotive technicians attend 2-year schools instead of a 4-year college – saving more, earning sooner, and gaining experience faster.

HOW

Get Involved

No matter your age, you can get involved in the automotive industry. Programs are available nationally, and you can test drive your career as an automotive technician today.

Start Now

Automotive technicians typically require a 2-year degree, however, you can test drive the career today. Go to our website to find out how you can get involved at GoProjectShift.com.
